

NESA I JORDA

TECHNICAL RIDER

Nesa i Jorda is a show with three artists, using aerial acrobatics, violin, talking, soil and a tiny tree. We can bring all material including rig and lights or we can minimize transports and use existing rigging point, lights and buy soil at the location.

Stage requirements: 6x6 meter. 1 rigging point at 5.5-7meters height.
(Preferably: 6 meters height)

We use the stage as a circle with the rig point in the middle. (Marked red)

Audience placed as in picture.

We put soil on the stage.

Circus equipment: 1 rope

Props: 1 oak trunk (we bring it, it needs to be correctly balanced)

We need:

1 tiny fir tree with roots. Can possibly be changed to other local tree type.

Seeds of maple, fir cones, chestnuts or other similar.

(It is not allowed to bring seeds of trees on international travels)

Maximum audience 120 persons mixed ages.

Recommended from 5 years, but works fine with younger kids also.

Sound technique: normally none. All sounds acoustic.

There is a possibility to slightly amplify the violin.

If so we bring:

Sennheiser xsw wireless system

Violin with pickup

And we need: a small speaker placed behind the scene.

No sound engineer is needed during the shows.

Light: we play with a fixed light, set up to highlight the stage.

Preferably in a dark or black room. The light should be quite soft.

No colors, only "neutral, slightly warm light" =).

We do not have a light plan and need no light engineer during the shows.

Soil: 250 liters of what in the Nordics is sold as Rhododendron / blueberry planting soil.

Rhododendron soil is a relatively coarse peat-bark mixture.

It has a good texture for stage and does not create to much dust.

Set up time: normally 3 hours, when we bring our own rig and lights.

First setup will need 3 hours with light engineer and rigger.

If everything is prepped we can set up in 30 minutes and clear the stage in 30 minutes.
